Scenario Optimization & "Do No Harm" Strategies

Advanced prescriptive modeling via Ridge Regression

Target Goal: Top-Quartile Return on Assets (ROA)

AGGRESSIVE PATH

Aggressive 60/40 Split

"DO NO HARM" CONSTRAINTS APPLIED

- Scenario paths enforce strict directional constraints (e.g., rejecting paths that achieve ROA purely through cost-cutting limits that harm loan growth).
- Movements are bounded by historical anomaly thresholds (P10 / P90 limits) mapped internally from the selected peer segment.
